Giving students control over the learning process can lead to a faster learning curve. Online Training Method can deliver overall time and cost savings, while maintaining learner satisfaction, confidence, and learning outcomes.

Effective eLearning

50-60%
better consistency of learning through technology-based training

50-60%

Online Training Method

50-60%

50-60%

Self-directed training enables the learner to self-identify knowledge and skill gaps, and reflect critically on the learning process and outcomes.

Voice-Assisted Manikins (VAMs) assess and provide feedback to:

Hand Positioning
Compression Depth
Compression Rate
Leaning
Compression Fraction
Ventilation Rate
Ventilation Volume

In one study, VAM technology reduced cost by 14% and showed potential to release instructors’ time for other activities.

HeartCode® students who practiced CPR on VAMs had significantly more compressions with adequate depth and ventilations with adequate volume.

eLearning Increases RETENTION RATES

25-60%
### Resuscitation Training Assessment

1. Is your resuscitation training consistent?
2. Does your training program provide students with the ability to complete the course at their own pace and tailor it to their learning needs?
3. Do your students complete training feeling competent and confident to perform CPR in emergency cases?
4. Is your program efficient in terms of staff, cost, and time?
5. Does your hands-on training provide students with objective and standardized performance feedback?
6. Is the administration of your training consuming time that could be spent doing team training?
